

CLEERLINE SSF™ TRI-HOLE STRIPPING TOOL

Part Number: SSF-TRIHOLEP

The Cleerline SSF™ Tri-Hole Fiber Optic Stripping Tool allows the easy removal of SSF™ patented polymer coating. Use these strippers to prepare SSF™ fiber for **fusion splicing**.

Successful fusion splicing of SSF™ fibers requires complete removal of the protective SSF™ polymer coating at the glass level.

This stripping tool is not intended for use when installing mechanical splices, such as Cleerline SSF™ connectors. **SSF™ polymer coating must remain in place for non-fusion splicing applications.**

The SSF-TRIHOLEP has three openings, allowing preparation of SSF™ or traditional fibers with up to a 3.0 mm jacket.

Each stripping tool package includes a bristled cleaning brush for maintenance of the tool's openings.

For more information, refer to the instructional videos at cleerlinefiber.com/resources.

FEATURES AND BENEFITS

- Allows complete removal of SSF™ polymer coating for fusion splicing
- Compatible with traditional and SSF™ fibers with up to a 3.0 mm outer diameter
- Includes cleaning brush for maintenance.

APPLICATIONS

- Preparing SSF™ fiber for fusion splicing
- Preparing Traditional (non-SSF™) fibers for termination/splicing
- Removing 600 μm - 3.0 mm jackets from SSF™ or traditional fibers

SPECIFICATIONS

Compatible Cables	SSF™ and Traditional Fiber Optic Cables
Max Jacketed Cable Diameter	3.0 mm
Number of Stripping Openings	3
Openings	<ul style="list-style-type: none">• 1.6-3.0 mm --- 600-900 μm: SSF™ & Traditional Fiber Jacket Removal• 250-900 μm --- 125 μm: Traditional Fiber Prep & SSF™ Fusion Splicing• 125 μm --- SSF™: Removal of SSF™ Polymer For Fusion Splicing ONLY
Length	6" / 152 mm
